

Innovation Station

Rounds Application

IN-NO-VA-TION

Innovation is the application of better solutions that meet new requirements, unarticulated needs, or existing market needs. This is accomplished through more effective implementation of products, services, and technologies, that are readily available to businesses and governments.

MAXIMO® ENTERPRISE ASSET MANAGEMENT

Takes the power, performance and possibilities of an enterprise asset management and work order system to an entirely new level. Built on a single software platform, Maximo Asset Management delivers a comprehensive view of all asset types — production, facilities, transportation and IT — across your enterprise. This holistic perspective allows you to see all of your assets, as well as identify all of the untapped potential within them. You gain the knowledge and control you need to closely align your organization's goals with the overall goals of your business.

- ❖ Facilitates capturing rounds and readings throughout a service area or plant.
- ❖ The Rounds Application is built within Maximo and includes both a desktop and Maximo Everyplace mobile toolset.
- ❖ Magnifies condition monitoring predictive programs by capturing real time, accurate data directly at the asset site.
- ❖ Time is automatically logged to the work order as readings are collected.
- ❖ The Rounds Application is field enabled using Maximo Spatial and ESRI for location, routing and spatial work management functions.
- ❖ Streamlines data entry via an easy to use application.

Starboard's Maximo Rounds Application provides your field staff a systematic, efficient approach to capturing large volumes of data. It streamlines data entry via an easy to use application and facilitates capturing rounds and readings throughout a service area or plant. With the Rounds Application, engineers and technicians can collect accurate and timely data needed to monitor equipment and continuously improve maintenance programs.

The field-based Rounds Application, using Maximo Everyplace, is map enabled through the integration of Maximo Spatial and ESRI. Field Personnel can record readings while they "walk" the assets accessing maps and GIS data as needed.

Operators, engineers, and technicians can identify potential issues and take immediate action by generating work orders and notifications on the spot – before they result in an incident or failure. The application magnifies the value of field and plant measurements by recording accurate data and allowing organizations to analyze it quicker. By electronically recording your readings and taking immediate action on out-of-spec conditions, you can effectively enforce safety guidelines and simplify reporting.

Starboard's Rounds Application allows you to get more out of routine condition monitoring, meter reading, and measurements, whether in the plant or in the field.
